

Q1) Check positive number :

task :

Next step: -

```
public class positive {
```

```
    public static void main (String[] args) {
```

```
        int num = 10;
```

```
        if (num > 0) {
```

```
            System.out.println (" Positive NO. ");
```

```
        }
```

```
        else {
```

```
            system.out.println (" Negative NO. ");
```

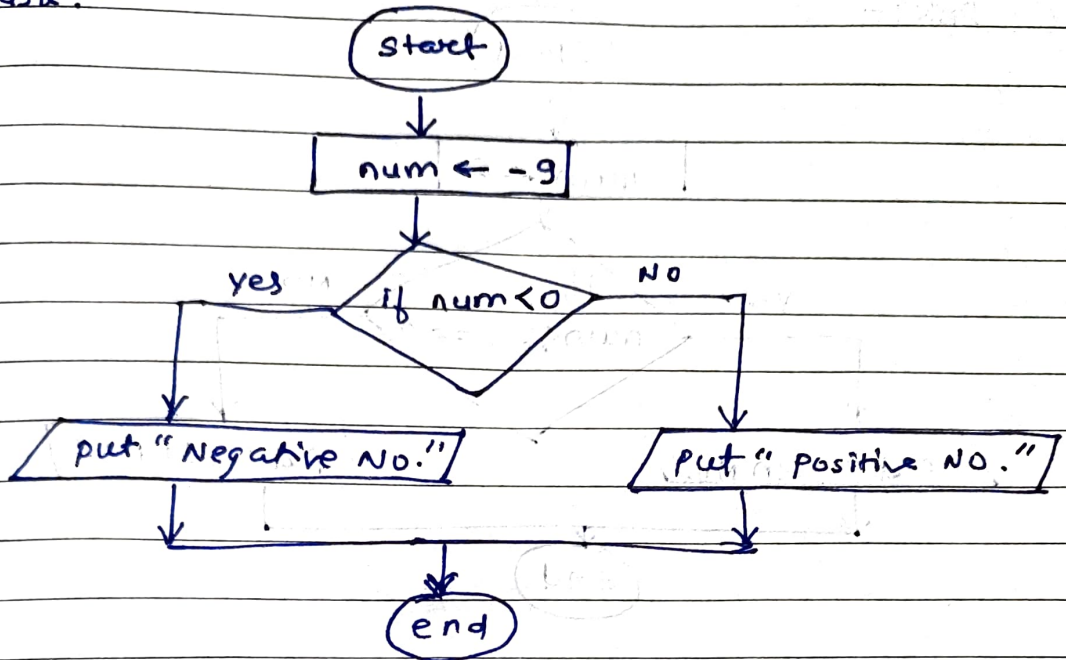

```
        }
```

```
    }
```

```
}
```

Q2) Check Negative No.

Task: -

Next step: -

```

class Negative {
  public Negative {

```

```

    public static void main (String[] args) {

```

```

        int num = -9;

```

```

        if (num < 0) {

```

```

            System.out.println (" Negative No.");

```

```

        }

```

```

        else {

```

```

            System.out.println (" positive No.");

```

```

        }

```

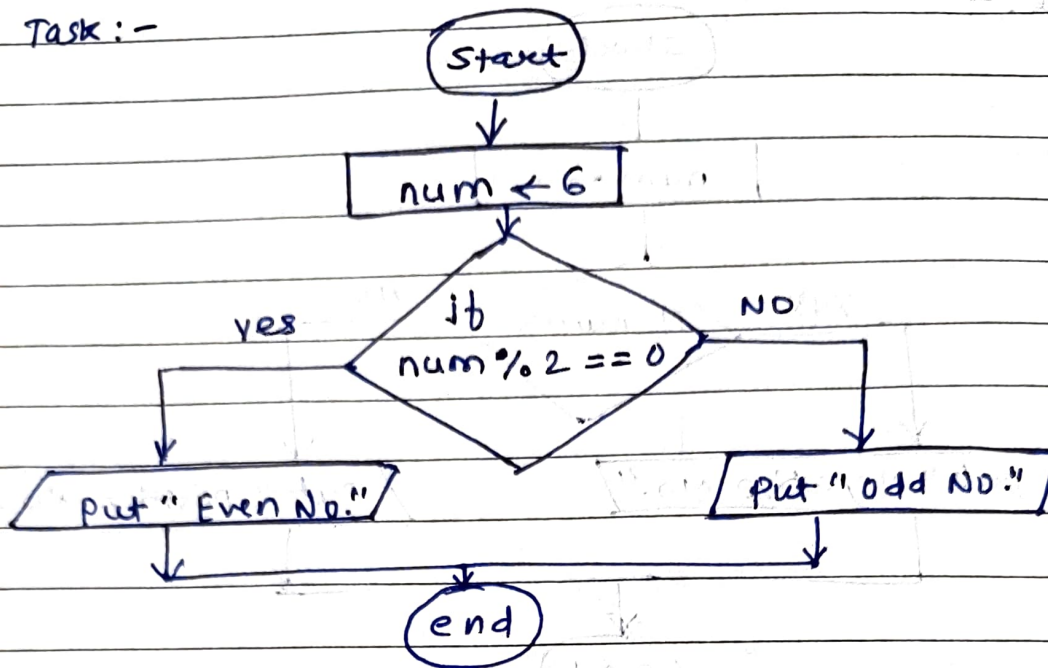

```

    }
}

```

Q3) Check odd or Even No.

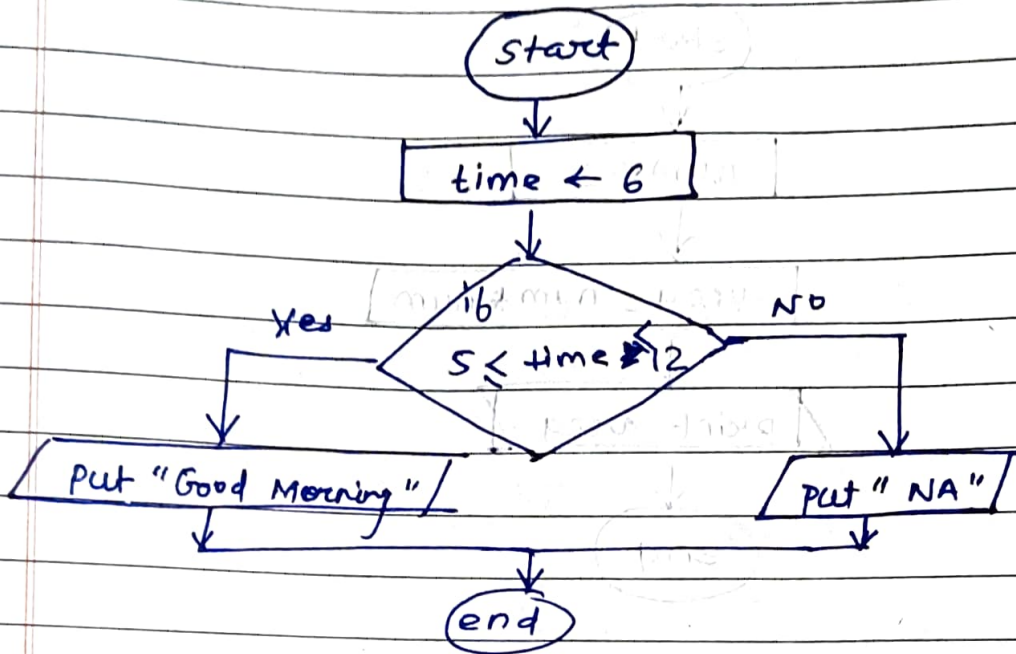

Task:-

Next step:-

```
public class Evenorodd {  
    public static void main (String [] args) {  
        int num = 6 ;  
        if (num % 2 == 0) {  
            System.out.println (" Even NO.");  
        }  
        else {  
            System.out.println (" Odd NO.");  
        }  
    }  
}
```

Q4) Display Good morning Message Based on Time :
Task:-

Next step:-

```

public class Gm {
    public static void main (String[] args){

```

```

        int time = 6 ;

```

```

        if (5 ≤ time ≤ 12) {

```

```

            System.out.println(" Good Morning");

```

```

        }

```

```

    else {

```

```

        System.out.println (" NA");

```

```

    }

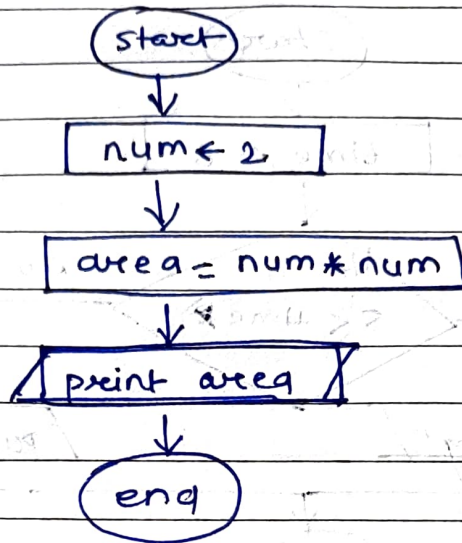

```

```

}
}

```

Q5) Print Area of square
task:-

Next step:-

```
public class Areasq. {
```

```
    public static void main (String[] args) {
```

```
        int area;
```

```
        int num = 2;
```

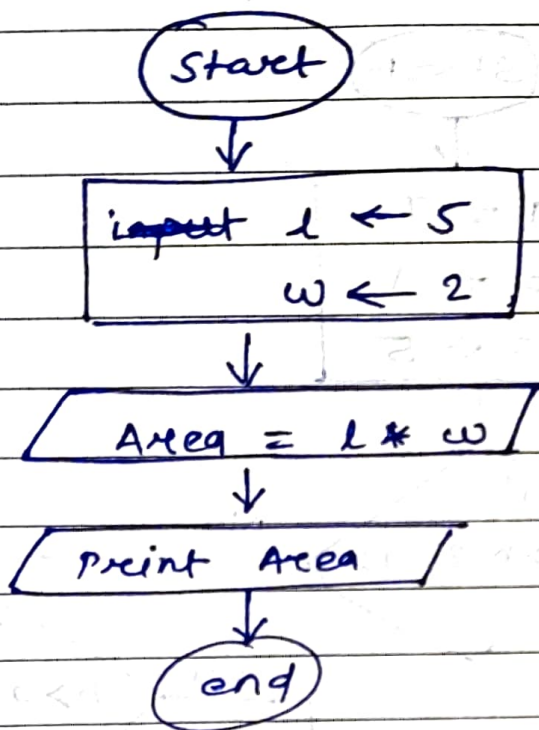

```
        area = num * num;
```

```
        System.out.println ("* area");
```

```
    }
```

```
}
```

Q6) Area of Rectangle:

Next step: -

```
public class RectArea {
```

```
    public static void main (String[] args) {
```

```
        int area;
```

```
        int l = 5, w = 2;
```

```
        area = l * w;
```

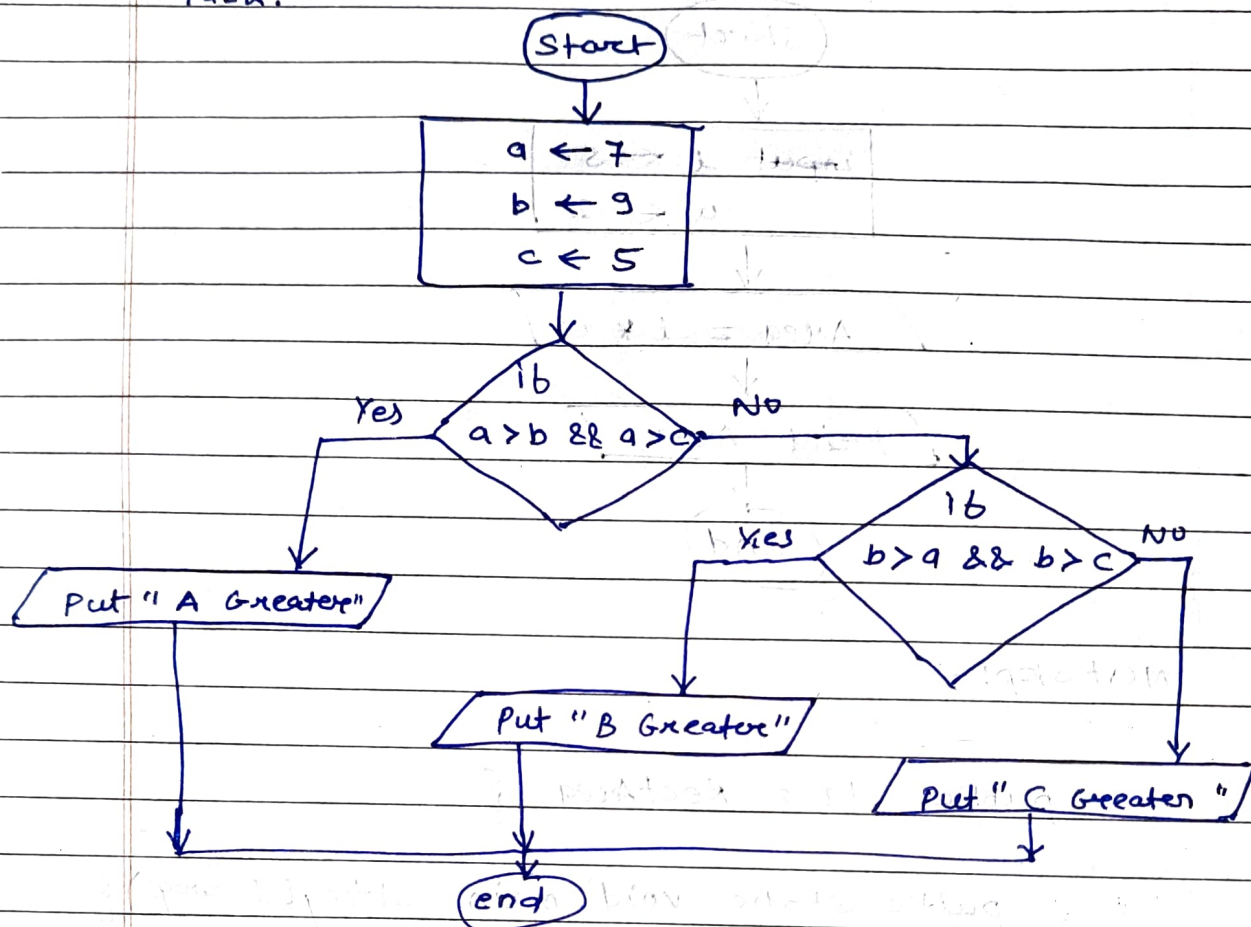

```
        System.out.println ( area );
```

```
    }
```

```
}
```

Q7) Find the largest of three Numbers

Task:-

Next step:-

```

public class GreaterNO {
    public static void main (String[] args) {
        int a = 7, b = 9, c = 5;
  
```

```

        if (a > b & a > c) {
            System.out.println (" A Greater");
        }
        else if (b > a & b > c) {
            System.out.println (" B Greater");
        }
        else {
            System.out.println (" C Greater");
        }
    }
}
  
```
